

D6 — Part 1 Contribution Report

Project: Recipix v4.1 — recipe DSL with dimensional types **Partners:** Berk Hakan Öge 210104004132 · İsmail Kabak 1901042652 **Submission:** Part 1 — 8 May 2026

Workload split

The split is **roughly even (50/50)**. The clean component split — İsmail owned the lexer, the language design spec, and the integration glue; Berk owned the parser, the AST, the test fixtures, and the tester-agent orchestration that surfaced the Round-2 bug fixes — gave each partner a separately defensible artefact for the May 14 written exam, which is the criterion the handout specifies (§3.1, §9). Reviews crossed the partner line in every row above: İsmail reviewed Berk’s parser changes (catching the `200g` lexer-side bug during integration, and the `tokens.py` duplication issue), and Berk reviewed İsmail’s spec drafts (catching the missing-control-structure §2 conflict and the action-verb-as-keyword issue before code was written).

We confirm both partners’ contributions are at least 40% of the total work. Each partner’s AI Usage Journal documents the sessions they personally drove and the components they personally produced; the journals are not shared and do not double-count agent work.

Signed, Berk Hakan Öge — 210104004132 İsmail Kabak — 1901042652
